Personal Profile

I am an established Quality Assurance Test Engineer looking to switch to Software Development. I believe my experience in solving problems on a day-to-day basis, consolidating needed information by communicating with analytics and developers will help me in my new role.

Currently I am in a Bootcamp from JustIT where I am learning about front-end and back-end to complement my Java knowledge.

I am looking forward to working with experienced engineers to gain more skills and develop myself as a Software Engineer professional.

Education and IT Training

08/2021 - Present	**Just IT Training Ltd, London** **Digital Skills Bootcamp: Software Development** A twelve week intensive bootcamp covering the fundamentals of Web and Software development.

08/2005-06/2006   **ANTOR Business Solutions, Moscow** - *Geographic Information Systems Engineer*

- Creating digital maps and transport graphs
- Special data analysis
- Writing helper tools

Interests and Achievements

Computing: I am constantly working on my pet projects. One of them is a booking system for my friends (to book the time when they are planning to come to my house) - created with Java, Spring Boot, Thymeleaf, Bootstrap and mySQL. I also created a site for a friend of mine who is a musician and needed the site to promote his guitar classes and attract prospective students.

Hobbies: I love hiking and running

Additional Info: After moving to the UK in 2016 I gave birth to my child and had some time to think about my future career. I have been in development for a while, and I have seen how it works from inside. So as a result, I decided to shift my career to my passion and become a professional Developer. From this time, I am on the way to my goal.
